

MESSAGE TO RESIDENTS

FROM THE GOLD COAST CITY COUNCIL

Recently we have been contacted by many of you regarding the strange clouds and jet emissions over the Gold Coast region that were seen to come from high flying aircraft. We have received many photographs like the ones below.

In 2009, the Australian Government allowed weather modification and aerial spraying by United Nations aircraft over our soil. Planes are spraying the higher atmosphere with heavy metals, barium dust and nano-particles in order to help change our climate. These heavy metals will eventually land on our roofs and waterways. Air pollution levels have risen over 78% over the past 14 months.

Therefore, we strongly advise residents not to drink tank water from this date forward. It has tested positive for unknown toxic residues.

Please keep indoors if you see these streaky clouds overhead, or see emissions from high flying jets for any period of time. We are co-operating with authorities in this matter, and rest assured we are monitoring the locations and number of passes made by these unmanned aircraft.

If you suffer any side effects - like headaches, sore throat, chest congestion, tiredness, sore eyes or sleeping difficulties, please contact your local doctor.

In some cases, compensation may be sought for specific medical conditions.

Please do not be alarmed.

We have written to the **United Nations Atmospheric Control Council** to advise them of our concern, and asked them reduce aerial spraying and HAARP activity within our region to make it safer for our communities to go outside.

Thank you for your co-operation, and you can find out more by visiting our website at, http://www.goldcoast.qld.gov.au/t_standard.aspx?pid=5766
